

Experimental page : ratios of curve fit deaths to curve fit confirmed cases (CFR)

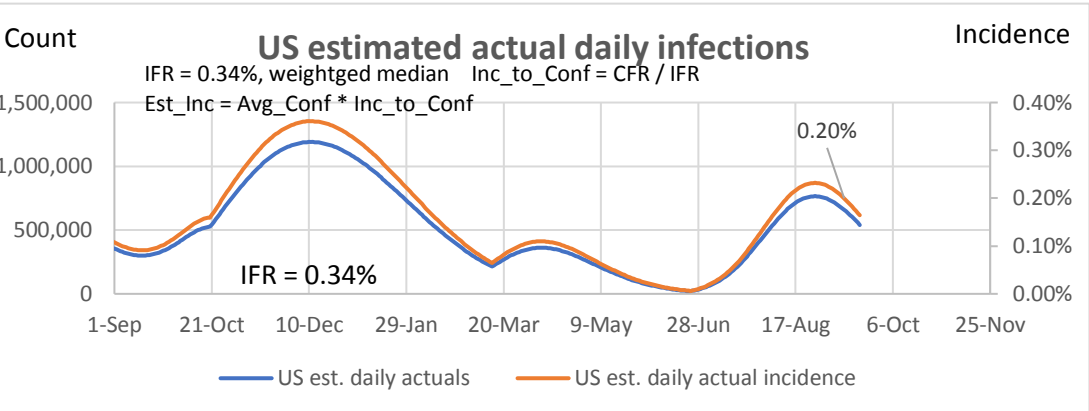

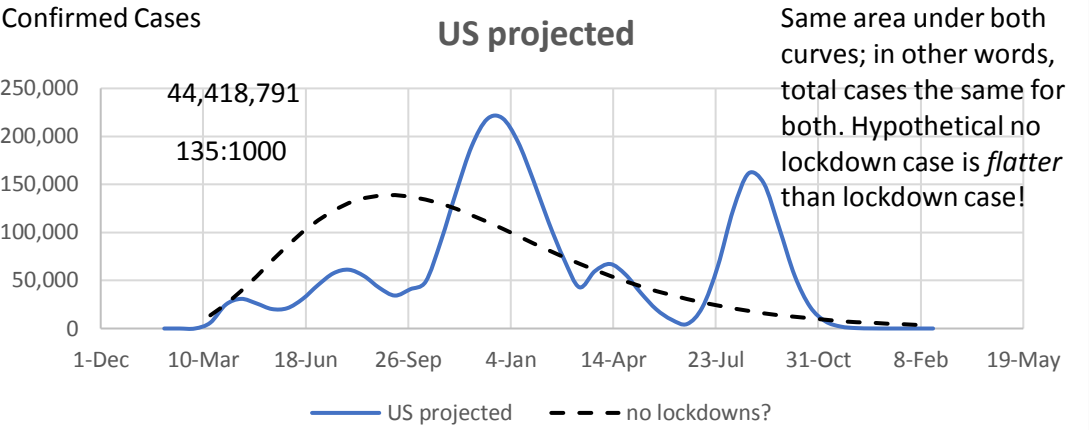

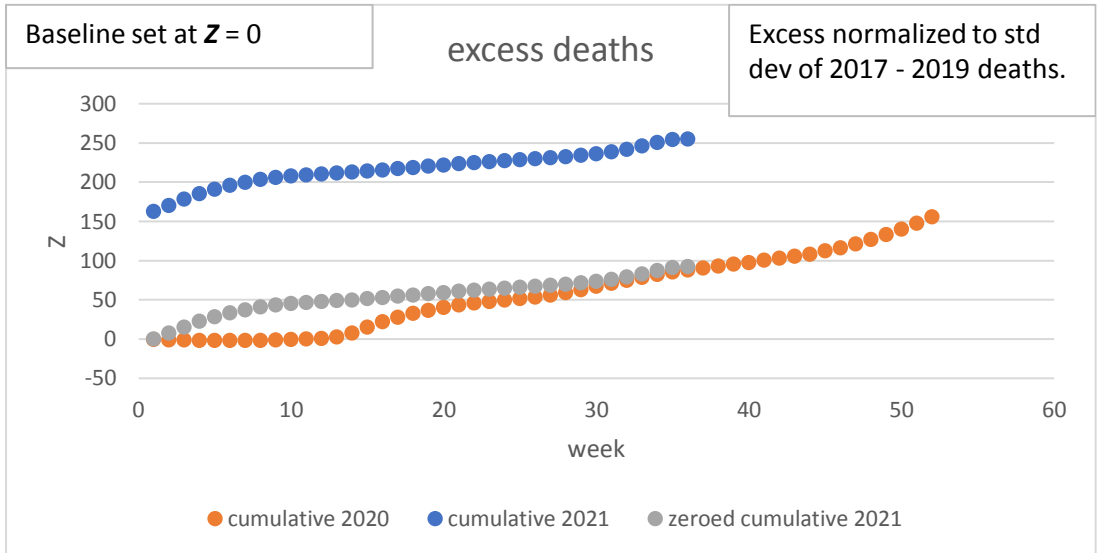

Excess deaths as a Z score:

Above based on Z score of two standard deviation from 2017-2019. What follows is cumulative plot of same.

Data in recent weeks are incomplete. Only 60% of death records are submitted to NCHS within 10 days of the date of death, and completeness varies by jurisdiction. Data are not weighted and counts are likely

False Positives Demonstration

Use 0.20% as estimated daily incidence

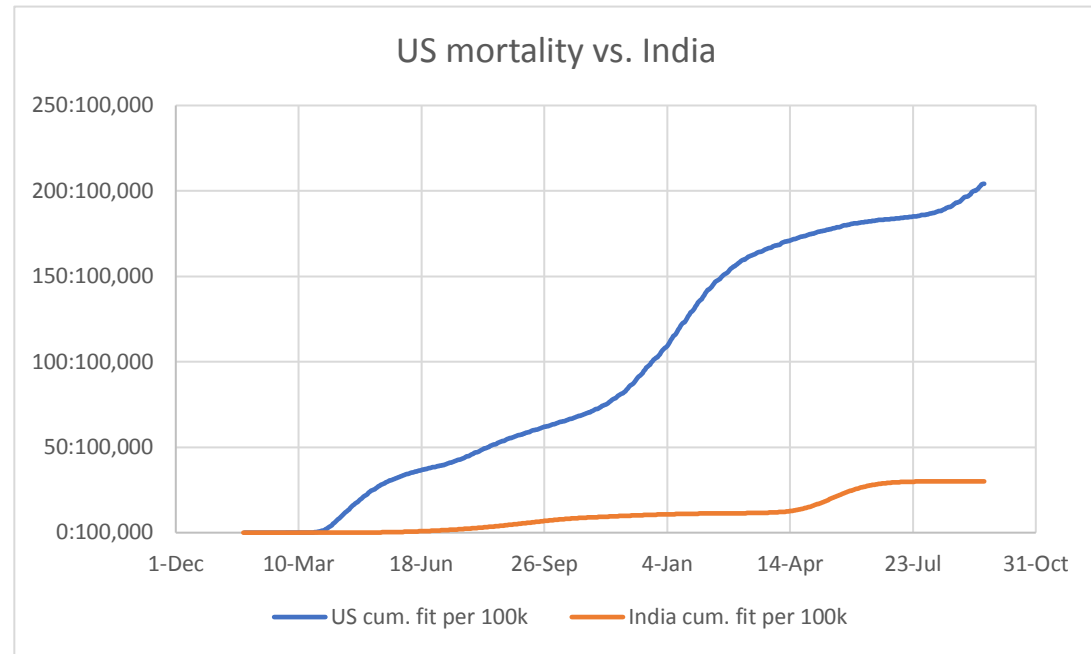

Prevalence estimated as avg. infected period of 2 weeks X incidence

	95% accuracy of test	
	Positive	Negative
test pos	2.660%	4.860%
test neg	0.140%	92.340%
	2.800%	97.200%

False pos. is more than half of total positives.

TRUE +	2.66%/7.52%	35.4%
FALSE +	4.86%/7.52%	64.6%
Total	-----	100.00%

0.20% X 14 = 2.800%	
Sensitivity	
Probability of detection where condition exists	
True + / (True + & False -)	
95%	
Specificity	
Probability of not detecting where condition doesn't exist	
True - / (True - & False +)	
95%	

USA Excess Deaths, 2020 (from CDC data):

Annualized on 52 weeks

	All Cause	All Cause, excl. CV19	CV19
3 yr average before 2020	859:100,000	859:100,000	-
2020	1016:100,000	905:100,000	-
Diff.	157:100,000	46:100,000	111:100,000

3 yr average
859:100,000

29% of All-Cause excess deaths are non-CV19

[Diff.](#)

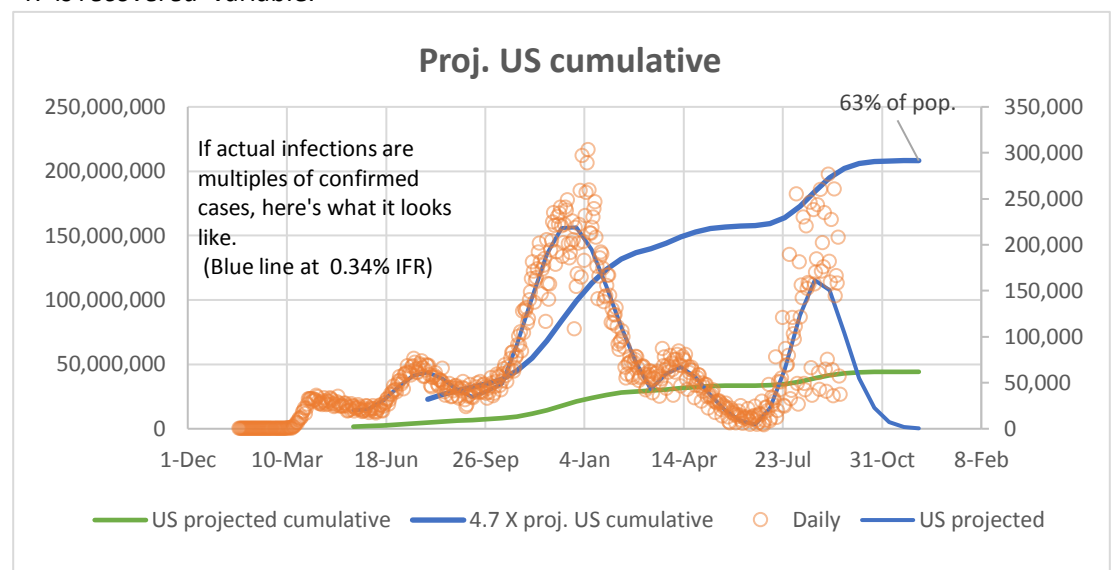

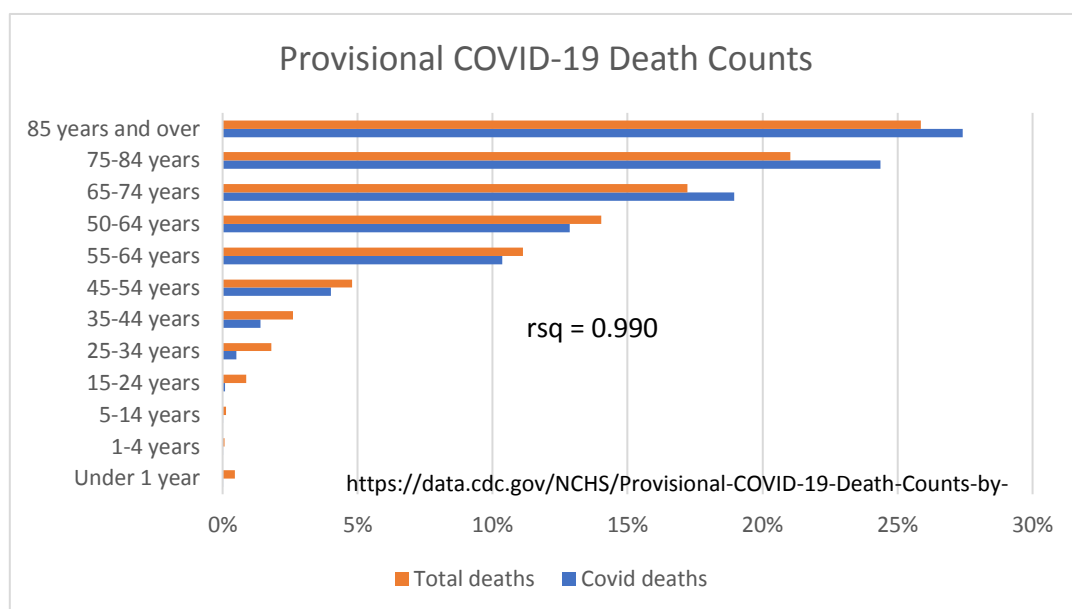

USA Excess Deaths to date (from CDC data):

36 weeks	All Cause	All Cause, excl. CV19	CV19
3 yr average before 2020	590:100,000	590:100,000	-
2021	696:100,000	606:100,000	-
Diff.	106:100,000	16:100,000	90:100,000

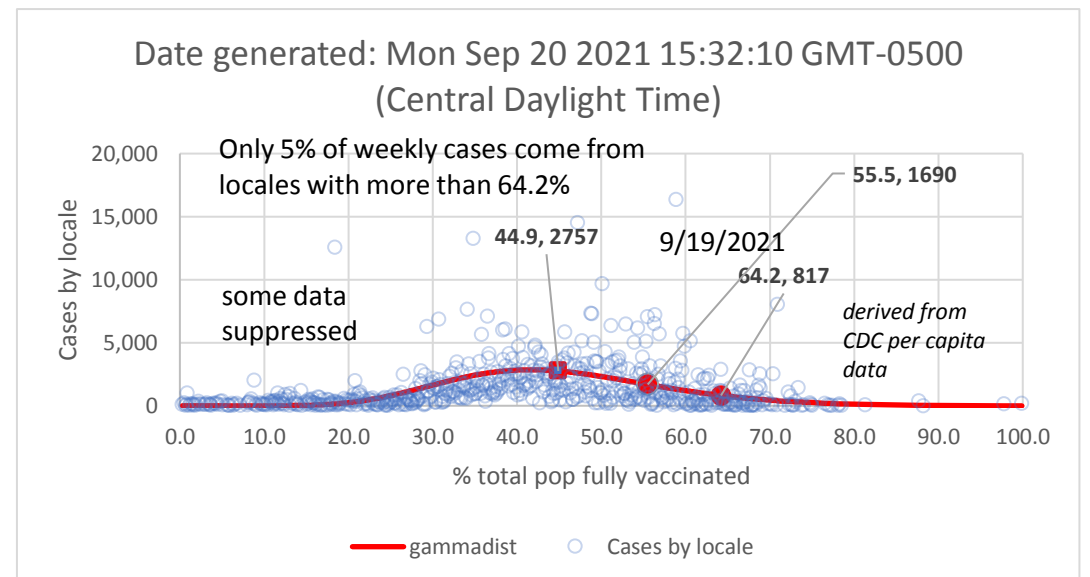

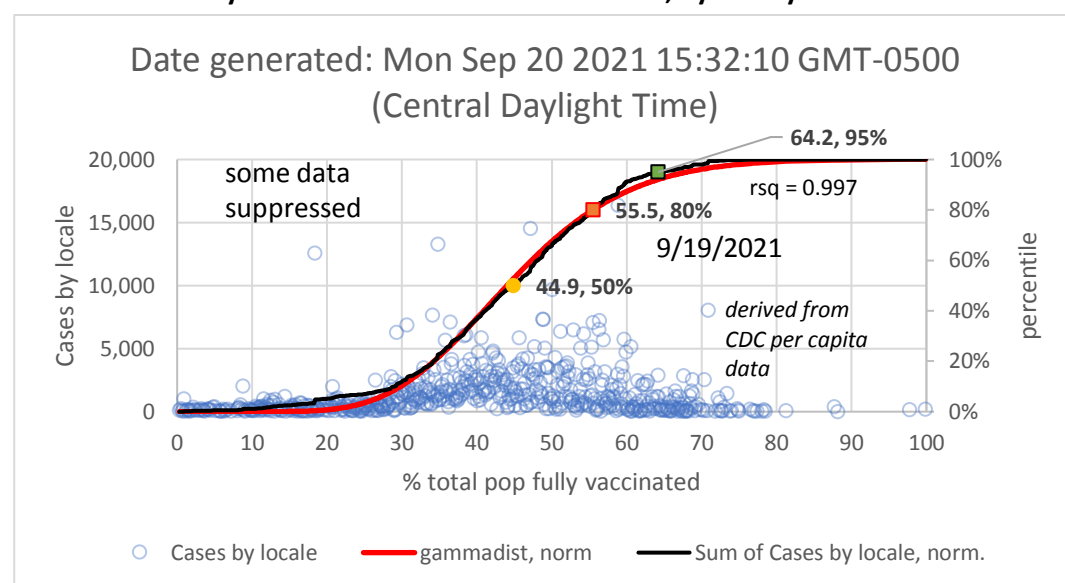

3 yr average
859:100,000

15% of All-Cause excess deaths are non-CV19

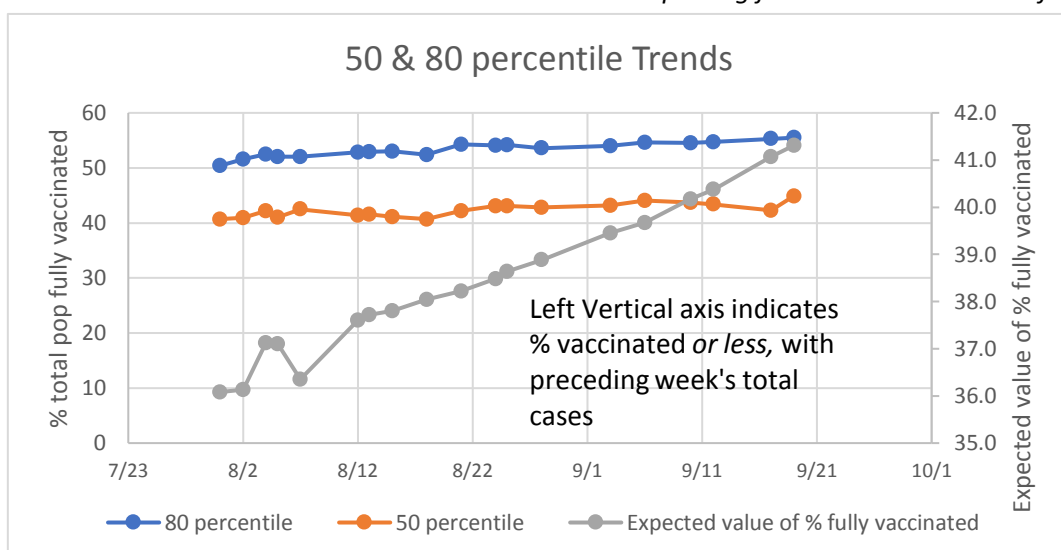

[Diff.](#)

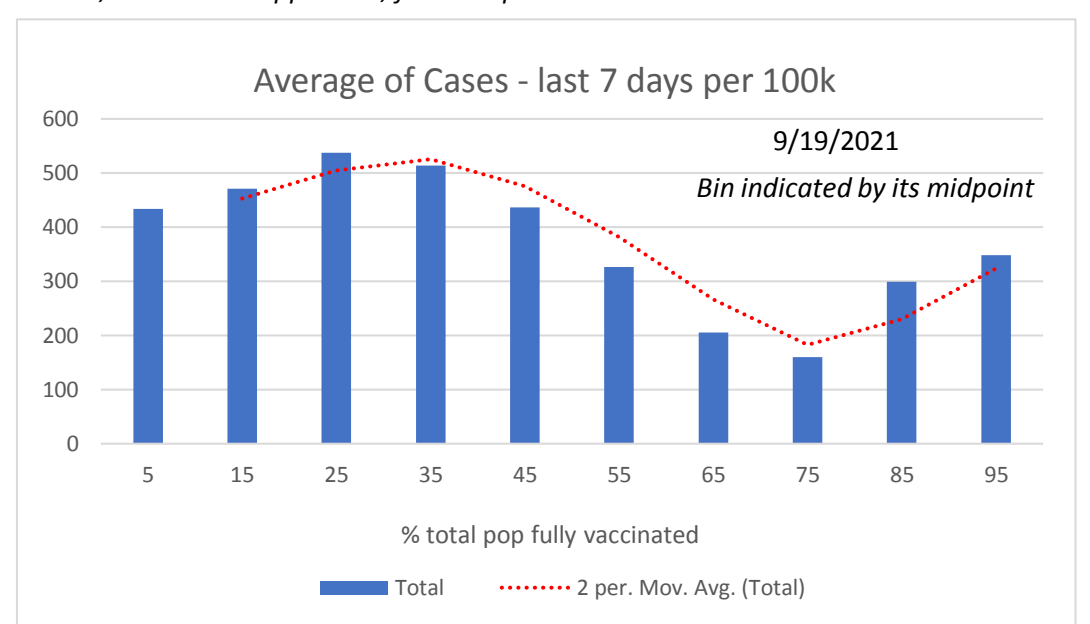

CDC county data on week indicated new cases, by % fully vaccinated.

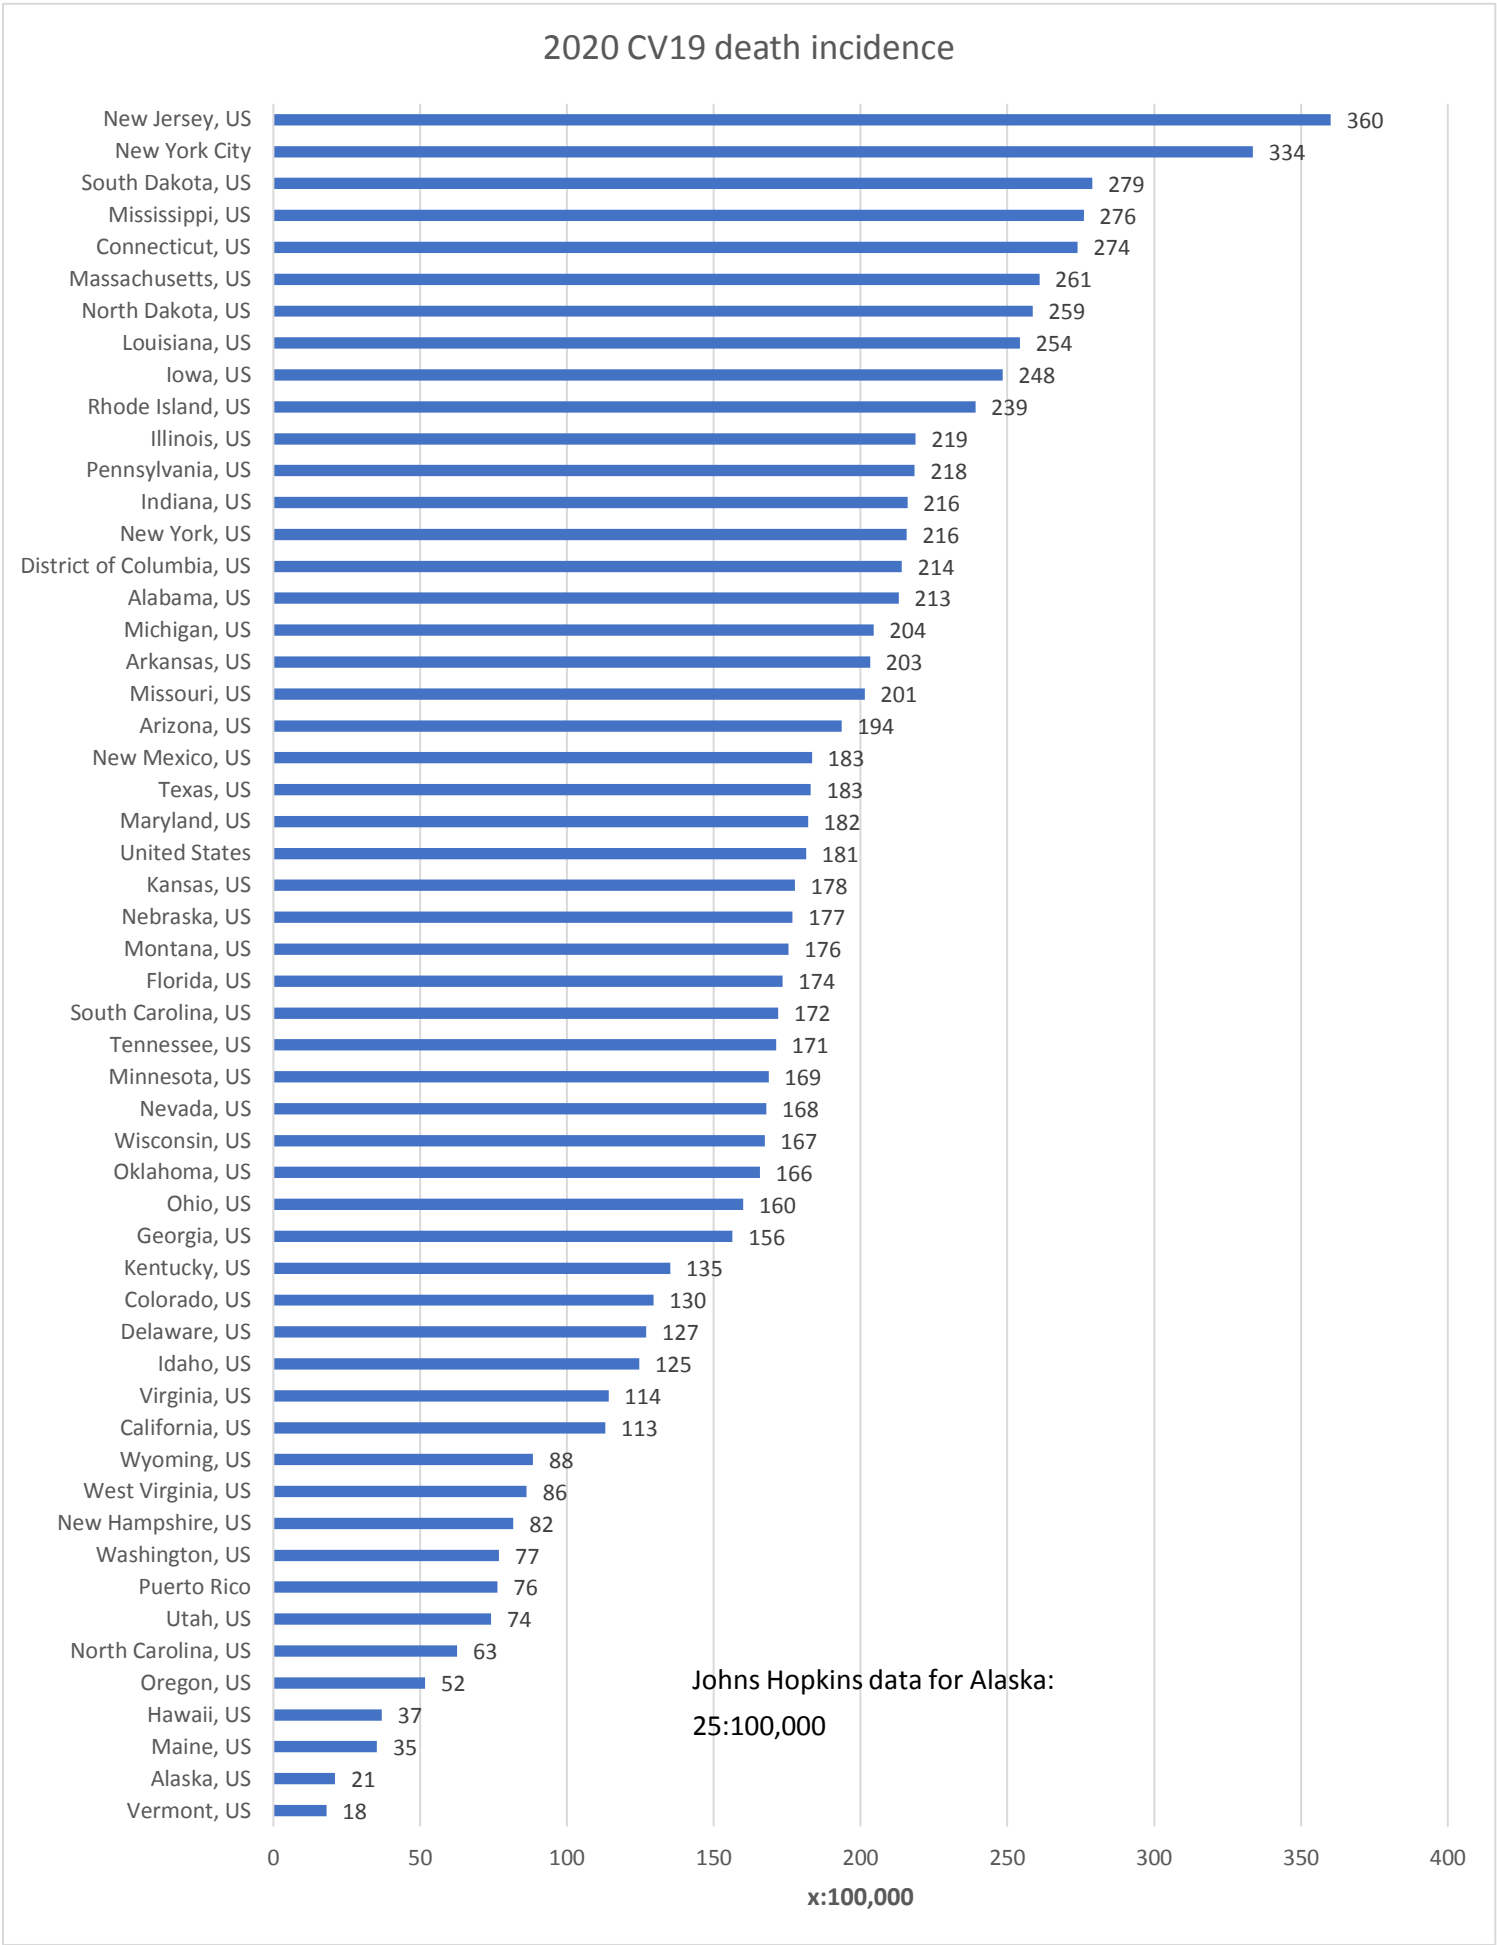

reporting jurisdictions is not a uniform distribution; some data suppressed, for example Texas
