

Common causes of death, normalized to COVID. Pre-Covid: 1Q2017 thru 1Q2020, Post-Covid 2Q2020 thru 1Q2021

Relative effect of COVID on various age groups, and compared to cause of death. These are all relative to COVID, which is 1.0 on each of four charts

Excess deaths as a Z score:

Z-score = 1 based on 2017 - 2019 one standard deviation.

Data in recent weeks are incomplete. Only 60% of death records are submitted to NCHS within 10 days of the date of death, and completeness varies by jurisdiction. Data are not weighted and counts are likely underreported.

False Positives Demonstration

Use 0.30% as estimated daily incidence

Prevalence estimated as avg. infected period of 2 weeks X incidence

	95% accuracy of test	
	Positive	Negative
test pos	3.990%	4.790%
test neg	0.210%	91.010%
	4.200%	95.800%
		100.00%

False pos. is more than half of total positives.

TRUE +	3.99%/8.78%	45.4%
FALSE +	4.79%/8.78%	54.6%
Total		100.00%

0.30% X 14 = 4.200%

Sensitivity
Probability of detection where condition exists
True + / (True + & False -)
95%
Specificity
Probability of not detecting where condition doesn't exist
True - / (True - & False +)
95%

Example only; sensitivity and specificity not necessarily equal.

US vs. Texas

USA Excess Deaths, 2020 (from CDC data):

Annualized on 52 weeks

	All Cause	All Cause, excl. CV19	CV19
3 yr average before 2020	859:100,000	859:100,000	-
2020	1016:100,000	905:100,000	-
Diff.	157:100,000	46:100,000	111:100,000

3 yr average

859:100,000

29% of All-Cause excess deaths are non-CV19
