

## Experimental page : ratios of curve fit deaths to curve fit confirmed cases (CFR)

### Excess deaths as a Z score:

Above based on Z score of two standard deviation from 2017-2019. What follows is cumulative plot of same.

Data in recent weeks are incomplete. Only 60% of death records are submitted to NCHS within 10 days of the date of death, and completeness varies by jurisdiction. Data are not weighted and counts are likely

### Confirmed Cases

### US projected

### Count

### US estimated actual daily infections

### Incidence

### False Positives Demonstration

Use 0.15% as estimated daily incidence

Prevalence estimated as avg. infected period of 2 weeks X incidence

95% accuracy of test

	Positive	Negative
test pos	1.995%	4.895%
test neg	0.105%	93.005%

False pos. is more than half of total positives.

TRUE + 1.995%/6.89%

FALSE + 4.895%/6.89%

100.00%

0.15% X 14 = 2.100%

### Sensitivity

Probability of detection

where condition exists

True + / (True + & False -)

95%

### Specificity

Probability of not detecting where

condition doesn't exist

True - / (True - & False +)

95%

Example only; sensitivity and specificity not necessarily equal.
