

Experimental page : ratios of curve fit deaths to curve fit confirmed cases

False Positives Demonstration

Use 0.10% from US est. incidence above as estimated daily incidence

Prevalence estimated as avg. inf period of 2 weeks X incidence

99% accuracy of test 0.10% X 14 = 1.400%

	Positive	Negative	
test pos	1.3860%	0.9860%	2.37%
test neg	0.0140%	97.6140%	97.63%
	1.4000%	98.6000%	100.00%

False pos. is 2/5ths of total positives!

TRUE	1.386%/2.37%	58.4%
FALSE	0.986%/2.37%	41.6%
Total	-----	100.00%

Counter-act this tendency by increasing test sensitivity. However this may increase false negatives, the recipients of which may be positive, think they're negative, and go spread it around some more.
