

Common causes of death, normalized to COVID. Pre-Covid: 1Q2017 thru 1Q2020, Post-Covid 2Q2020 thru 1Q2021, USA

Relative effect of COVID on various age groups, and compared to cause of death. These are all relative to COVID, which is 1.0 on each of four charts, USA

Conditions Contributing to COVID-19 Deaths, by State and Age, Provisional 2020-2022

This dataset shows health conditions and contributing causes mentioned in conjunction with deaths involving coronavirus disease 2019 (COVID-19) by age group and jurisdiction of occurrence. 2020-2022 data are provisional.

False Positives Demonstration

Use 0.19% as estimated daily incidence

Prevalence estimated as avg. infected period of 2 weeks X incidence

| | 95% accuracy of test | |
|----------|----------------------|----------|
| | Positive | Negative |
| test pos | 2.527% | 4.867% |
| test neg | 0.133% | 92.473% |
| | 2.660% | 97.340% |

False pos. is more than half of total positives.

| | | |
|---------|--------------|---------|
| TRUE + | 2.527%/7.39% | 34.2% |
| FALSE + | 4.867%/7.39% | 65.8% |
| Total | | 100.00% |

0.19% X 14 = 2.660%

| Sensitivity |
|--|
| Probability of detection where condition exists |
| True + / (True + & False -) |
| 95% |
| Specificity |
| Probability of not detecting where condition doesn't exist |
| True - / (True - & False +) |
| 95% |

Example only; sensitivity and specificity not necessarily equal.

USA Excess Deaths, 2020 (from CDC data):

| Annualized on 52 weeks | All Cause | All Cause, excl. CV19 | CV19 |
|--------------------------|--------------|-----------------------|-------------|
| 3 yr average before 2020 | 859:100,000 | 859:100,000 | - |

(CDC quit updating this 14 May 2022)

Data in recent weeks are incomplete. Only 60% of death records are submitted to NCHS within 10 days of the date of death, and completeness varies by jurisdiction. Data are not weighted and counts are likely underreported. The previous week's data is shown as dashed, to give an idea of the effect of the gradual update.
