

Experimental page : ratios of curve fit deaths to curve fit confirmed cases

USA Excess Deaths (from CDC data):

Annualized on 44 weeks	All Cause	All Cause, excl. CV19	CV19
3 yr average before 2020	854:100,000	854:100,000	-
2020	974:100,000	893:100,000	-
Diff.	120:100,000	38:100,000	81:100,000

3 yr average
859:100,000

32% of All-Cause excess deaths are non-CV19

False Positives Demonstration

Use 0.15% from US est. incidence above as estimated daily incidence

Prevalence estimated as avg. inf period of 2 weeks X incidence

99% accuracy of test 0.15% X 14 = 2.100%

	Positive	Negative	
test pos	2.079%	0.979%	3.06%
test neg	0.021%	96.921%	96.94%
	2.100%	97.900%	100.00%

False pos. is nearly 1/3 of total positives!

TRUE +	2.079%/3.06%	68.0%
FALSE +	0.979%/3.06%	32.0%
Total	-----	100.00%

Counter-act this tendency by increasing test sensitivity.
However this may increase false negatives, the recipients of which may be positive, think they're negative, and go spread it around some more.
