

Experimental page : ratios of curve fit deaths to curve fit confirmed cases

False Positives Demonstration

Use 0.05% from US est. incidence above as estimated daily incidence

Prevalence estimated as avg. inf period of 2 weeks X incidence

99% accuracy of test 0.05% X 14 = 0.700%

	Positive	Negative	
test pos	0.6930%	0.9930%	1.69%
test neg	0.0070%	98.3070%	98.31%
	0.7000%	99.3000%	100.00%

False pos. is more than half of total positives!

TRUE	0.6930%/1.69%	41.1%
FALSE	0.993%/1.69%	58.9%
Total	-----	100.00%

Counter-act this tendency by increasing test sensitivity. However this may increase false negatives, the recipients of which may be positive, think they're negative, and go spread it around some more.
