Experimental page: ratios of curve fit deaths to curve fit confirmed cases

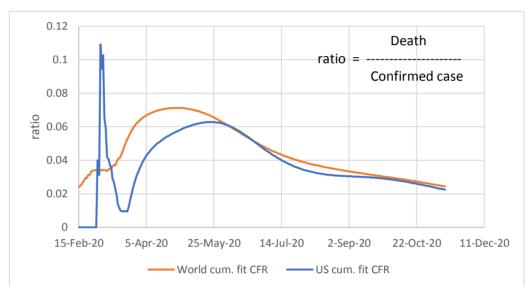

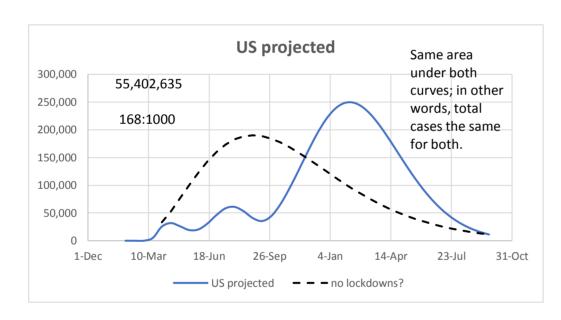

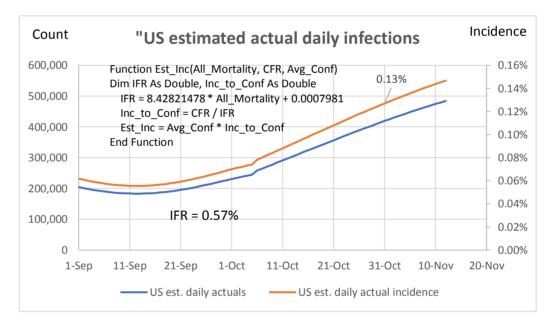

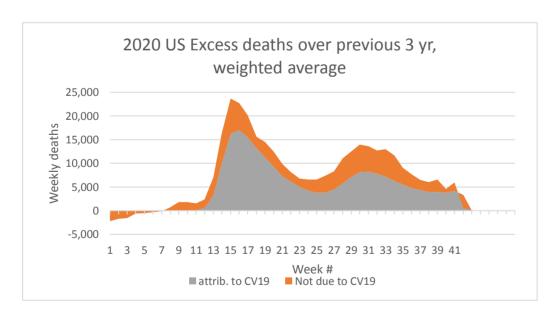

False Positives Demonstration

Total

Use 0.12% from US est. incidence above as estimated daily incidence

Prevalence estimated as avg. inf period of 2 weeks X incidence

99% accuracy of test

0.12% X 14 = 1.680%

99%	0.		
	Positive	Negative	
test pos	1.6632%	0.9832%	2.65%
test neg	0.0168%	97.3368%	97.35%
	1.6800%	98.3200%	100.00%

False pos. is nearly 2/5ths of total positives!

TRUE 1.663%/2.65% 62.8%

FALSE 0.983%/2.65% 37.2%

Counter-act this tendency by increasing test sensitivity. However this may increase false negatives, the recipients of which may be positive, think they're negative, and go spread it around some more.
