Experimental page: ratios of curve fit deaths to curve fit confirmed cases (CFR)

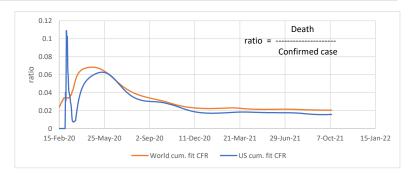

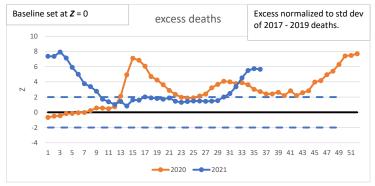

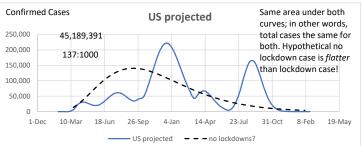

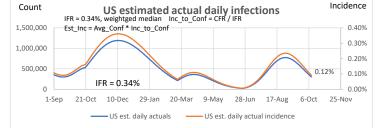

Excess deaths as a Z score:

Above based on $\,{\rm Z}\,$ score of two standard deviation from 2017-2019. What follows is cumulative plot of same.

Data in recent weeks are incomplete. Only 60% of death records are submitted to NCHS within 10 days of the date of death, and completeness varies by jurisdiction. Data are not weighted and counts are likely

False Positives Demonstration

Prevalence estimated as avg. infected period of 2 weeks X incidence
