

# Relative effect of COVID on various age groups, and compared to cause of death. These are all relative to COVID, which is 1.0 on each of four charts

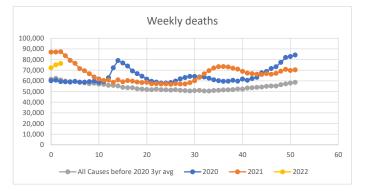

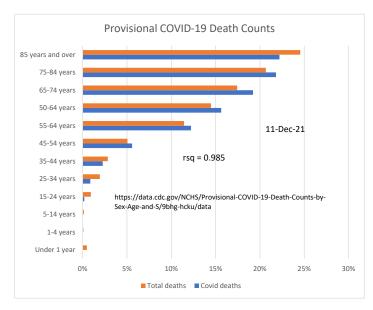

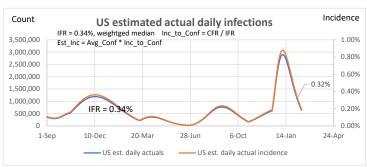

Z-score = 1 based on 2017 - 2019 one standard deviation.

Data in recent weeks are incomplete. Only 60% of death records are submitted to NCHS within 10 days of the date of death, and completeness varies by jurisdiction. Data are not weighted and counts are likely underreported.

### False Positives Demonstration

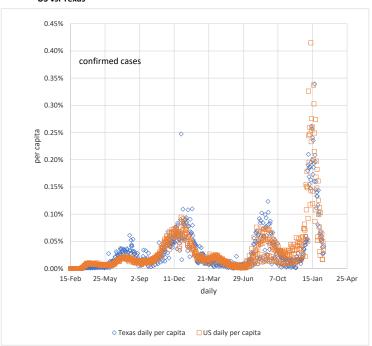

Use 0.30% as estimated daily incidence

Prevalence estimated as avg. infected period of 2 weeks X incidence

| Frevalence estimated as avg. Infected period of 2 weeks x incidence |                      |             |                     |                                    |
|---|----------------------|-------------|---------------------|------------------------------------|
| 95  | 95% accuracy of test |             | 0.30% X 14 = 4.200% |                                    |
|   | Positive             | Negative    |                     | Sensitivity                        |
| test pos  | 3.990%               | 4.790%      | 8.78%               | Probability of detection           |
| test neg  | 0.210%               | 91.010%     | 91.22%              | where condition exists             |
|   | 4.200%               | 95.800%     | 100.00%             | True + / (True + & False -)        |
|   |                      |             |                     | 95%                                |
| False pos. is more than half of total positives.                    |                      |             | Specificity         |                                    |
| TRUE +  | 3.99%/8.78           | 3.99%/8.78% |                     | Probability of not detecting where |
| FALSE +   | 4.79%/8.78           | 3%          | 54.6%               | condition doesn't exist            |
| Total   |                      |             |                     | True - / (True - & False +)        |
|   |                      |             |                     | 95%                                |

Example only; sensitivity and specifity not necessarily equal.

#### US vs. Texas

## USA Excess Deaths, 2020 (from CDC data):

Annualized on 52 weeks

All Cause All Cause, excl. CV19 CV19

3 yr average before 2020 859:100,000 859:100,000 
2020 1016:100,000 905:100,000 
Diff. 157:100,000 46:100,000 111:100,000

| 3 yr average |  |
|--------------|--|
| 859:100,000  |  |

29% of All-Cause excess deaths are non-CV19
