## Experimental page: ratios of curve fit deaths to curve fit confirmed cases (CFR)

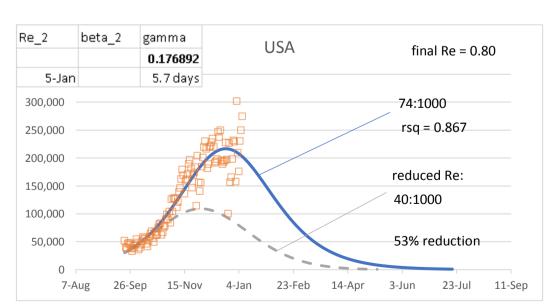

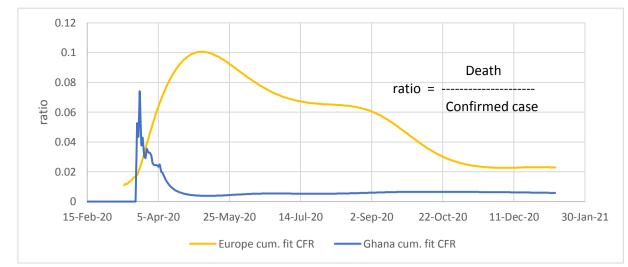

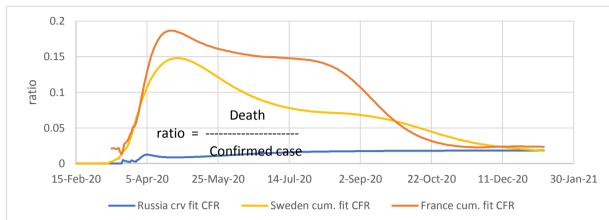

Demonstration of SIR model where  $R_e$  is linearly reduced to 0.80 at the end of the sequence:

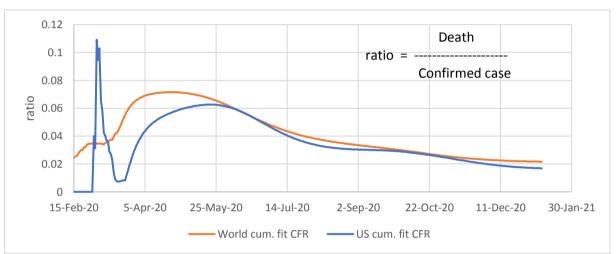

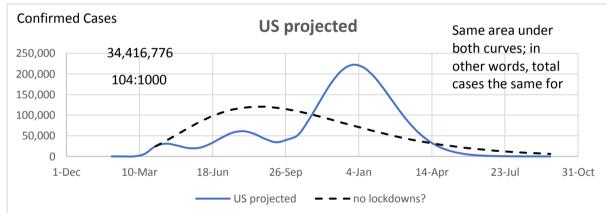

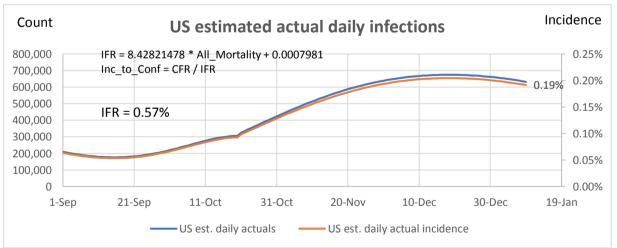

Reducing the  $R_{\,e\,}$  while keeping gamma constant is the same as reducing contact rate. Contact rate is reduced through isolation, lockdowns, and vaccinations. Seems to indicate timing of start of measures is a big factor. The orange data taken as without measures, but we know certain measures were taken. Hard to determine effect, without a basis of comparison.

## **False Positives Demonstration**

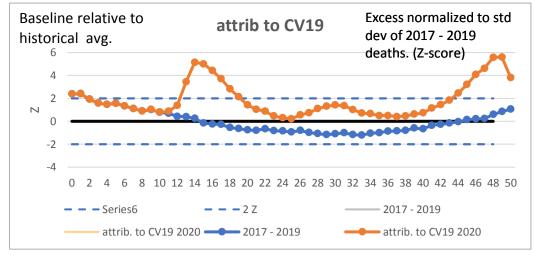

Total

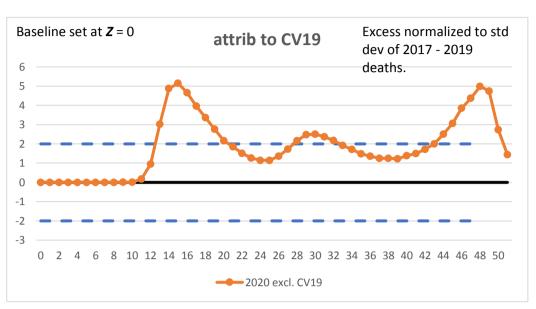

Use 0.19% from US est. incidence above as estimated daily incidence Prevalence estimated as avg. infected period of 2 weeks X incidence

|          | 99% a | accuracy o | f test   |               | 0.19% X 14 = 2.660% |
|----------|-------|------------|----------|---------------|---------------------|
|          | P     | Positive   | Negative |               |                     |
| test pos |       | 2.633%     | 0.973%   | 3.61%         |                     |
| test neg |       | 0.027%     | 96.367%  | <u>96.39%</u> |                     |
|          |       | 2.660%     | 97.340%  | 100.00%       |                     |

False pos. is a bit over 1/4 of total positives! 2.633%/3.61% TRUE + 73.0% FALSE + 0.973%/3.61% 27.0% 100.00%

Counter-act this tendency by increasing test sensitivity. However this may increase false negatives, the recipients of which may be positive, think they're negative, and go spread it around some more.

## **USA Excess Deaths (from CDC data):**

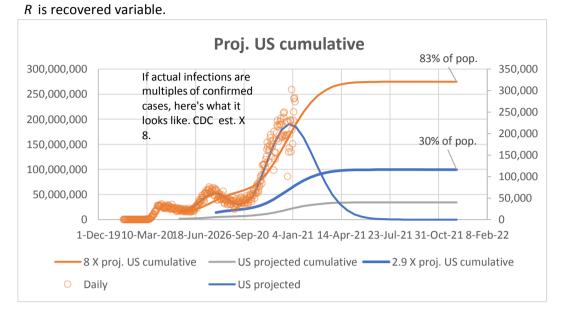

|   | Annualized on 52 weeks |              | Weeks are labelled 0 thru 51 |            |  |
|---|------------------------|--------------|------------------------------|------------|--|
|   |                        | All Cause    | All Cause, excl. CV19        | CV19       |  |
| 3 | yr average before 2020 | 859:100,000  | 876:100,000                  | -          |  |
|   | 2020                   | 1009:100,000 | 909:100,000                  | -          |  |
|   | Diff.                  | 133:100,000  | 34:100,000                   | 99:100,000 |  |

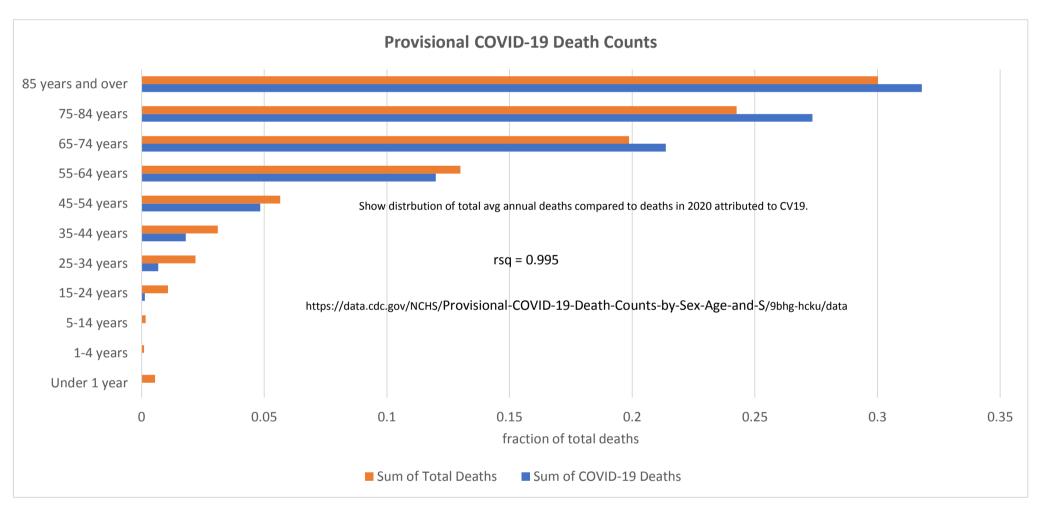

3 yr average 859:100,000

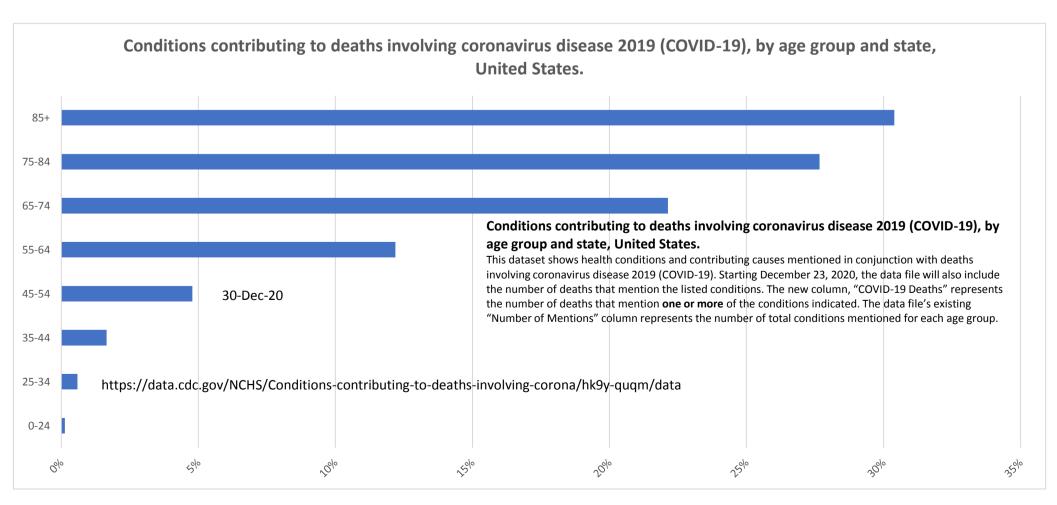

26% of All-Cause excess deaths are non-CV19

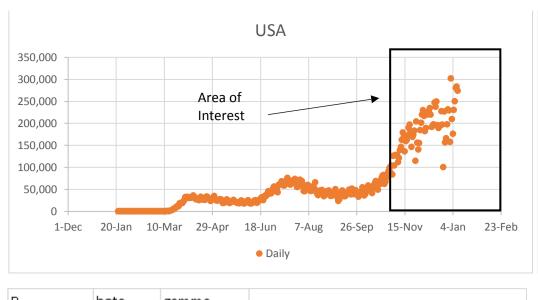

https://data.cdc.gov/NCHS/Excess-Deaths-Associated-with-COVID-19/xkkf-xrst/data

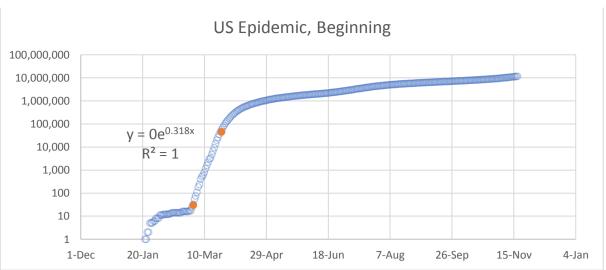

K = 0.318 gamma = 0.171  $R_o = \exp(K/\text{gamma}) = 6.42$  84% samma = 0.286  $R > [1-1/R_0]/N = 3.04$  67%

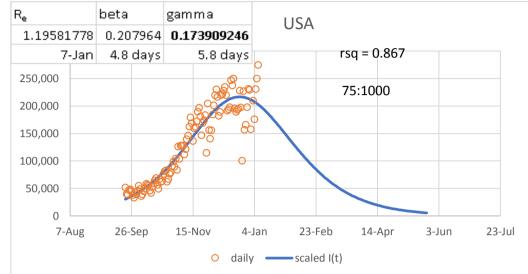

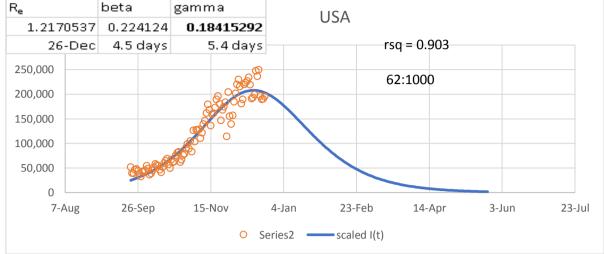

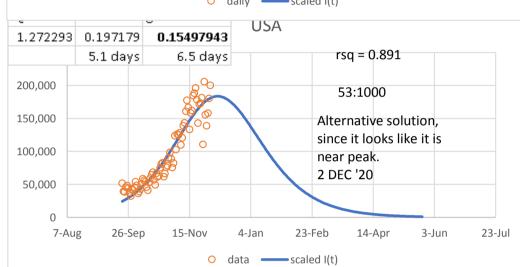

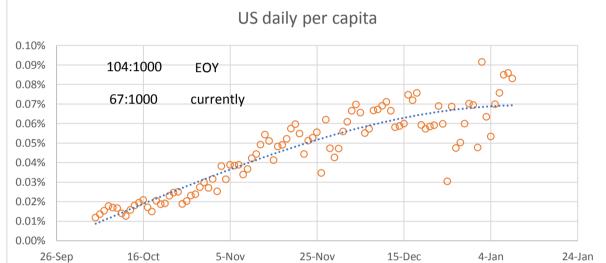

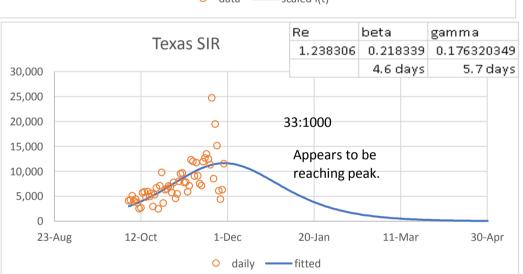

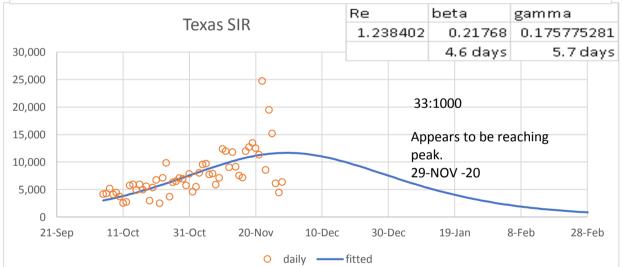

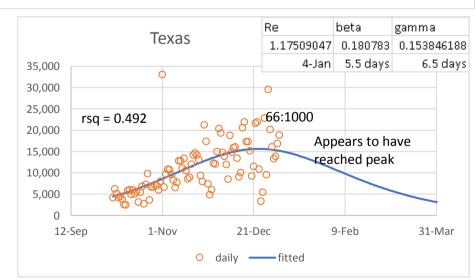

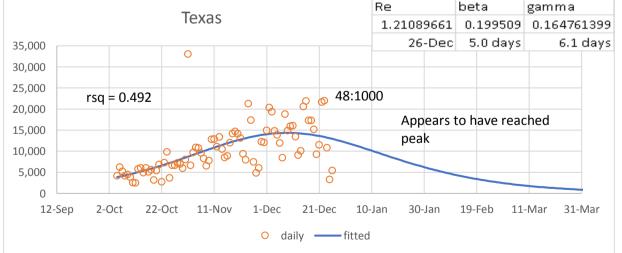

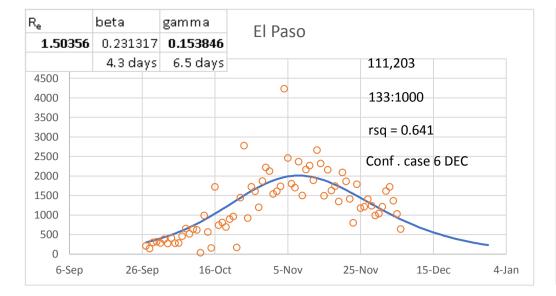

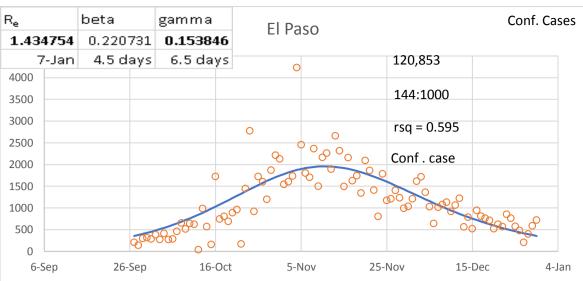

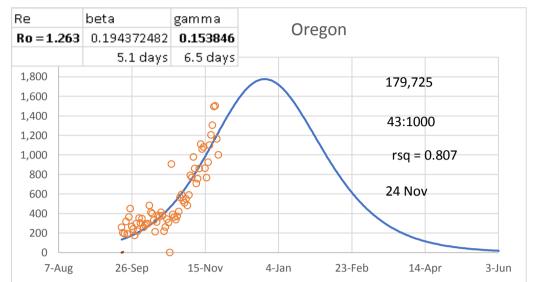

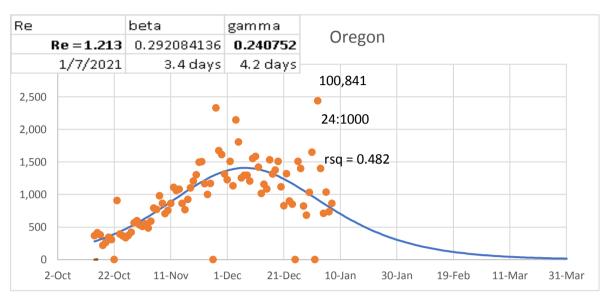

## Difference between 2019 and 2020

| <u>State</u>           | deaths per 100,000 | <u>note</u>     |
|------------------------|--------------------|-----------------|
| North Carolina         | -188               | 2019 hurricanes |
| West Virginia          | -111               | ??              |
| Puerto Rico            | -69                | 2019 hurricanes |
| Hawaii                 | 3                  |                 |
| Alaska                 | 3                  |                 |
| Oregon                 | 19                 | Keep in mi      |
| Washington             | 38                 | not disting     |
| Maine                  | 39                 | 19 deaths.      |
| Connecticut            | 44                 |                 |
| Rhode Island           | 52                 |                 |
